Working Safely with the Den Frame

To ensure this Wooden Den Frame is handled well, erected safely and lasts for years to come, we recommend the following safety guidance.

The den frame is made of three solid wooden pieces that fix together using four wooden connectors and a set of Velcro straps.

To avoid undue movement, place two of the wooden connectors over the two top leg joints, and two connectors over the bottom leg joints. This will fix the pieces together to form the structure of the den.

Finally, to fully stabilise the den, place the Velcro straps securely around the legs, equally spaced-out halfway up from the bottom and down from the top.
